

TitraPRO2™ pH Electrode

“We require Green Chemistry, Fast Analysis, and Robust Systems, while still being accurate and precise.”

This is a statement which we at MANTECH continue to hear from our customers. The release of the TitraPRO2™ pH electrode continues MANTECH’s tradition of commercializing innovations which address our customers’ wants and needs.

The TitraPRO2™ is a premium pH electrode available at a non-premium price. Advantages of this electrode include:

- Designed specifically for MANTECH Systems
- Outperforms other more expensive pH electrodes
 - Already proven by International Commercial Laboratories
- Rapid Stability
- Improved accuracy and precision
- RapidAlk™ and RapidDuo™ are even faster with the TitraPRO2™!
 - RapidAlk™ already is the fastest alkalinity analysis in the market
- The perfect solution for multiple matrices
 - Ideal for all water and soil types
 - Can also be used for food matrices and oil applications (non-aqueous)
- Green chemistry initiatives:
Continues the MANTECH tradition of using less sample volume for analysis, resulting in less reagent use and less plastic waste from disposable sample tubes
- Delivered as a standard with all MANTECH systems that include a pH measurement method and/or pH based titration method
