

TECHNICAL BULLETIN

NUMBER 2025 - 004

Date: May 5, 2025
Author: Justin Dickerman
Subject: Minimum Computer Requirements for BOD Pro Software

All MANTECH software requires Regional Settings set to United States English.

Minimum computer specifications for BOD Pro software:

<i>Type</i>	<i>Minimum Specification</i>
<i>OS</i>	Windows 10 or 11 Professional, 64-Bit
<i>CPU</i>	Intel Core i5 quad core or equivalent
<i>RAM</i>	16 GB
<i>HDD / SSD</i>	At least 500 MB free
<i>Graphics Card Resolution</i>	1280 x 1024
<i>OS Regional Settings</i>	U.S. English
<i>USB Ports</i>	1 USB C and 4 USB A (min 2 USB 3.0 or above) or use of USB hub for mouse and keyboard (and other non- system hardware components)
<i>Ethernet Port</i>	Minimum of 1 – reserved for AutoMax400 Series (or additional USB port for Ethernet adapter)
<i>Peripherals</i>	Keyboard Mouse HDMI compatible monitor

Note: MANTECH cannot guarantee use of MANTECH Pro software with other programs or instruments installed on the system computer. All anti-virus programs, network connections, and additional instrument software packages function differently and, while steps are taken during the installation process to help minimize the risk of negative interactions between these software packages and the MANTECH software, it is not possible to test all other programs for possible conflicts. Power settings must be configured so the hard drive of the computer does not power down automatically at any time, or auto update. It is also recommended that network settings be configured so that information or patches which may alter settings on the computer are not installed automatically, to minimize the risk of damage to the database from these alterations. If your system requires technical support and additional programs are installed on the computer, you may be asked to uninstall those packages to determine if they are causing conflicts with the MANTECH software. Also note that administrative privileges are required to operate MANTECH software.
